

## System architecture diagram

- Two centers one in Viborg and one in Horsens
- Regular member only can access user interface to see events for that center only
- Premium member can access user interface for both centers
- Both centers have a three-tier-architecture consisting of
  - ➔ Tier-1 = The Presentation tier.
  - ➔ Tier-2 = The Logic tier.
  - ➔ Tier-3 = The Data tier.
- There is a p2p connection between the two centers (distributed system).
- Each center has a database. Now the two databases need to connect, this is done by having a different id for each center.
- In order to, make the systems heterogenous the one of tier could be coded in another language fx. The client
